	Skeleton / Visual / Copy	Scope / Structure	Strategy / Principle / Value
	We can show image that they can unsubscribe anytime. The video can be given high visibility. What would happen in a demo class - "You can interact with the tutor in a live session;" "Tell them your needs" "Understand the teachers methodology" "Try a demo class for free" Our product will give a price break down and give "reason for cashbacks" Show the value for money. Why it is expensive. And how it compares with other platforms.	The student is directed to elearning web page and the consultant can talk in the chat box from the elearn website. The consultant could send them a personalised list of 2-3 tutors on whatsapp based on their needs. A consultant could call and ask them what went well and what did not. And suggest alternate solutions (another demo etc.) Students can choose the medium - mail or whatsapp or SMS. Student can choose whether they want suggestions on other tutors based on their need or they want to talk to only that teacher. We can have a feedback form after a demo session which can suggest based on the students response. There can be a few free resources (videos, books, material) for students to start out in their journey. We can compile the messages and send only once in a day. We'll take a small/quick quiz on their needs (what to learn, motivations to learn, how much time they have, class size, ratings, reviews). Seeing the video can help students know better about the teacher. Our product should show prominently the ratings and reviews for the teachers. In the full profile view, we should show the reviews of previously attended students. Ratings based on "value for money", "friendliness", "usage of interactive tools" 10:30 - 11 (5 seats available) The demo scheduling can be more organised as its very unorganised at the moment. Other ways of interacting, phone call or whatsapp video call etc. Students can be presented with courses like prerequisite for this course. The courses they can take after this. EMI possibility with many finance agencies. The recorded video lectures are available for 6 months. In the feedback form. Or in Would this help your friend, tell them about it. Attend a demo class with a friend. Students would like to showcase that they are learning. (if I'm learning French, japanese) Students can share the demo they are joining on their social media.	Our product should support the students when their motivation might dip a bit low. Our product should give the students the control over their data and ability to unsubscribe when they don't find it valuable. Our product should not confuse the student with too many options. At the same time shouldn't limit the students choice to only one. Our product should match-make the student and tutor/course. We ought to bring the students to this part of the journey with least friction as possible. Tutors should convey early if there are any changes in the schedule. Our product should allow choice for students to select a demo session based on their convenient time. Our product should respect the time commitments of the students and tutors. Our product will deliver competitive prices and quality. Our product should give the students the opportunity to join a class with their friends.

Observations

Discovering Sulekha	Students try various ways of learning a language but fail in them and want some guide and discipline around their learning.	Students hesitate to share their number before seeing any value.	Students find too many options to be confusing.	Students want tutor suggestions based on the problems they have and want to address.	Students are not seeing an intro video of the tutor.	Students rely on ratings and reviews of previous students to learn about the tutors.	Students are concerned about not able to find a convenient time, platform to connect on with the tutor.	Students are frustrated when tutors don't inform about changes in the demo schedule. Or tutors couldn't attend the demo on the time decided.	Students sometimes change priorities in what they want to learn.	Students are concerned about the courses being overpriced or malpractice in pricing and discounts.	Students are concerned about course duration and class duration.	Students are more likely to opt for a course/platform when their friends/ family / seniors/ faculty suggest.
		Students might want to share their info for only one value proposition.	Students find that a tutor who was suggested is not meeting their needs.	They want a prescription for the problems (improve vocab., confidence to speak in public)			Students are concerned about getting individual time with the tutor in the demo session.	Or they want to learn something else before taking this up.	Or Students give more priority to professional courses.	Students compare prices on various platforms.		
		Students find continuous messages to join, irritating and causes drop off.	Students who fill up the form on Sulekha don't discover/explore teachers.				Students take their final / major decisions after their demo experience.			Students are concerned about paying all the money upfront for a course.
